

Education Meeting Monday December 4th

Georg (Skip) Kremer
The Magic of Infrared Photography

Westbridge Camera Club
Doors open at 6:30 pm for socializing
Meeting starts at 7:00 pm

Midwest Photo Exchange
2887 Silver Dr.
Columbus, OH
<https://mpex.com>

What is Infrared (IR) Photography? Skip will explore the effects of the near Infrared (NIR) part of the spectrum on photography and how that portion of the electromagnetic spectrum can change the way we see the world. He will discuss modified Full Spectrum digital cameras and various optical filters that enhance both color and monochrome images. "Dual range" optical filters as well as painterly techniques will also be presented. This is a unique opportunity to learn the many hidden areas of photography not often discussed.

All levels of photographers should find this introduction to IR both inspiring and educational. Join Skip as he guides you to a deeper understanding of this fascinating realm of photography.
